Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 Excerpt: .can be determined by multiplying the volume by the weight of unit volume. The weight of unit volume of various materials in common use may be obtained from Table II., p. 163. Ex. 1. If the length of a wrought iron slab be 8 ft., the depth 2 ft., and breadth 3 ft., Area of one end = $3 \times 2 = 6$ sq. ft.-. volume = $6 \times 8 = 48$ cub. ft. Weight = $48 \times 480 = 23040$ lbs. A similar case is illustrated in Fig. 39, in which the length BO is divided into 8 equal parts, the breadth into 3, and the depth into 2. Then it is seen that there are 6 square units in the end DOOM of the slab, and these are faces of a row of six unit cubes. There are 8 such rows; hence the volume is $8 \times 6 = 48$ cub. ft. Total Surface of a Bight Prism.--The total surface is, from Fig. 39, seen to be twice the area of the face ABCD, and twice the area of ADEF, together with the area of the two ends;-. surface = $2(l d + b l + b d)$; or, perimeter of base multiplied by altitude together with area of the two ends. Ex. 2. The internal dimensions of a box without lid are: length 8 ft., breadth 3 ft., and depth 2 ft.; find the cost of lining it with zinc at 7d. per square foot. Area of...
