Excerpt: . . . from the sediment, thereby maximizing the exposure of the amphipods to the test sedi-ments. Information on temperature, salinity, dissolved oxygen, pH and ammonia in the test chambers was obtained during tests of each batch of samples to ensure compliance within acceptable ranges. Ammonia concentrations were determined in both pore waters ( day 0 of the tests ) and overlying waters ( days 2 and 8 of the tests ). Concentrations of the union-ized form of ammonia were calculated, based upon measures of total ammonia and con-current measures of pH, salinity and temperature. Twenty healthy, active animals were placed in each test chamber, and monitored to ensure they burrowed into sediments. Non-burrowing animals were replaced. The jars were checked daily, and records kept of dead animals, and animals on the water surface, emerged on the sediment...
