This increase in the extent of heating-surface, assuming the power developed to remain unchanged, will result in an improvement in the performance of the boiler of 2.86 per cent (column 8). The facts underlying the analysis are primarily the results of tests. VIII. CONCLUSIONS CONCERNING BOILER.PRESSURE VERSUS BOILER CAPACITY AS A MEANS OF INCREASING THE EFFICIENCY OF A SINGLE.EXPANSION LOCOMOTIVE. 32. In the preceding chapters an analysis has been given showing the saving which may result in locomotive service, first, by increasing the pressure, the boiler capacity remaining unchanged, and, second, by increasing the heatingsurface, the pressure remaining unchanged. A summary of the conclusions of these chapters is presented as figs. 80 to 85, in which the full line represents the gain through increase of boiler.pressure and the dotted fine the corresponding gain through increase of boiler capacity. The values for these diagrams are taken directly from tables 4 and 6. It will be seen that starting with pressures which are comparatively low, the most pronounced results are those to be derived from increments of pressure. With each rise in pressure, however, the chance for...
