

Stress-Inducible Cellular Responses

Filesize: 2.15 MB

Reviews

The book is straightforward in read through better to recognize. it absolutely was writtern quite completely and valuable. Its been printed in an exceptionally simple way which is only after i finished reading this book where really altered me, alter the way i believe.

Birkhäuser Sep 2011, 2011. Taschenbuch. Book Condition: Neu. 24.4x17x cm. This item is printed on demand - Print on Demand Neuware - 'Stress-Inducible Cellular Responses' are essential for survival of cells of all species under adverse conditions. At the molecular level this is accomplished by a number of essential proteins all of which are involved in various aspects of cellular homeostasis through protective or adaptive functions. Interestingly, molecules such as heat shock proteins have properties as molecular chaperones and are involved in multiple stages of a protein biogenesis beginning with synthesis and involvement in the subsequent events of folding, translocation, and degradation. Heat shock proteins have a critical role to stabilize folding intermediates and to prevent protein aggregation. In addition, stress-proteins serve as targets for immune responses in immune homeostasis and during infections. The term Stress Response reflects the rapid growth and breadth of this field which includes the molecular and cellular response to drugs, UV irradiation, oxidative stress, and environmental toxins. Radical scavengers such as superoxide dismutases and inducible regulatory proteins of metallic ion status such as ferritin and protein disulfide isomerases are also considered within the frame of stress proteins and represent a new and growing class of stress responses. 495 pp. Englisch.
