On the Vision of Cameos and Intaglios. The beautiful experiment of converting a cameo into an intaglio, and an intaglio into a cameo, by monocular vision, is well known. In 1825 I had occasion to investigate this subject, and in January 1826 I published an account of my observations, with an ample notice of the previous labours of other authors. Mr WHEATSTONE has ingeniously connected this optical fallacy with the union of dissimilar images on the retina, though he does not refer it to this union as its cause. After quoting my previous explanation of the illusion, he makes the following observations upon it. These considerations do not fully explain the phenomenon, for they suppose that the image must be inverted, and that the light must fall in a particular direction; but the conversion of relief will still take place when the object is viewed through an open tube without any lenses to invert it, and also when it is equally illuminated in all parts. + In thus objecting to the falseness of my explanation, Mr WHEATSTONE has overlooked the great number of experiments by which I have supported it; and especially those facts in which I observed the fallacy when the object is viewed without even an open tube, without inversion;--with both eyes open, and when it is placed in broad daylight. Mr Wm. W. then gives his own opinion as follows. If we suppose a cameo and an intaglio of the same...
